User Acceptance
Testing (UAT) is a type
of testing performed by
the end user or the client
to verify/accept the
software system before
moving the software

application to the production environment. UAT is done in the final phase of testing after functional, integration and system testing is done.

This type of Acceptance Testing, also known as Alpha Testing, is

performed by members of the organization that developed the software but who are not directly involved in the project (Development or Testing). Usually, it is the members of Product Management, Sales and / or Customer Support.

Acceptance Testing - SOFTWARE TESTING Fundamentals

In engineering and its various subdisciplines, acceptance testing is a test conducted to determine if the requirements of a specification or contract are met. It may involve chemical tests, physical tests, or performance tests. In systems engineering, it may involve black-box testing performed on a

system prior to its delivery. In software testing, the ISTQB defines acceptance testing as: Formal testing with respect to user needs, requirements, and business processes conducted to determine wheth

Acceptance testing - Wikipedia

Acceptance testing is a kind of test performed on the system to check for its compliance and acceptance. It is performed in the end, after all the other tests have been executed on the system. It is the last stage in the process of testing the software.

During the design and procurement phase of the project, a critical step prior to equipment delivery to site is Factory Acceptance Testing (FAT). FAT verifies that the equipment is designed per specification before leaving the factory, where any issues discovered are much

easier and cheaper to fix, rather than delaying testing until equipment is installed on-site.
