Rev. ed. of: Raj's practical management of pain / [edited by] Honorio T. Benzon ... [et al.]. 4th ed. 2008.

From the President of the Research Society on Alcoholism In recent years the alcohol research field has matured and is attracting a substantial number of eager and technically sophisticated researchers. There is a feeling of excitement and premonitions of breakthroughs as more and more of alcohol's actions are being detailed. I, however, have at times been sobered by the perception that the lure of parsimonious explanations and the appeal of studying easily demonstrable effects obscure the critical issues re garding alcohol abuse and alcoholism. Central questions regarding (1) the reinforcing properties of ethanol and other factors responsible for inappro priate consumption of alcohol, (2) the heterogenous characteristics (both bi ologic and sociologic) of the alcoholic population, and (3) the differential predisposition of individuals to alcohol-induced medical problems needed to be vigorously pursued. Researchers who used animals as models for the human condition needed to become more intimately aware of the variety of factors that are of importance in the development of alcoholism in an indi vidual. On the other hand, researchers studying humans needed to attempt to more clearly define and categorize diagnostic criteria and characteristics of various alcoholic populations. Such categorization and continued character ization of alcoholism allows not only for a framework of concepts within which proper animal models for studies of biologic mechanisms can be de veloped but also allows for consideration of the most apt treatment approaches.

With contributions from the fields of pharmacy, dietetics, and medicine, Handbook of Food-Drug Interactions serves as an interdisciplinary guide to the prevention and correction of negative food-drug interactions. Rather than simply list potential food-drug interactions, this book provides explanations and gives specific recommendations based on th

Nutritional Management of Renal Disease, Fourth Edition, offers in- depth reviews of the metabolic and nutritional disorders prevalent in patients with renal disease and serves as an in-depth reference source concerning nutrition and kidney disease. This classic translational reference provides correct diagnosis - and therefore correct treatment - of renal, metabolic, and nutritional disorders. Nephrologists, diebetologists, endocrinologists, dieticians, and nutritionists depend on a strong understanding of the molecular basis for the disease. This fourth edition includes thorough new case reports, offering expert advice on how to use the latest research and clinical findings in counseling patients about dietary and lifestyle options. Readers gain insight into which treatments, medications, and diets to use based on the history, progression, and genetic make-up of a patient. Includes

the latest comprehensive clinical practice guidelines (CPGs) for the nutritional management of kidney disease from the National Kidney Foundation and the Academy of Nutrition and Dietetics, covering recommendations for each essential nutrient, as well as for some nonessential nutrients Presents a comprehensive, translational look at all aspects of metabolic and nutritional disorders in one reference Provides a common language for nephrologists, nutritionists, endocrinologists, and other interested physicians to assimilate information and discuss the underlying research and translation of best practices for the nutritional management and prevention of renal disease Saves clinicians and researchers time in quickly accessing the very latest details on nutritional practice as opposed to searching through thousands of journal articles

Emphasising the multi-disciplinary nature of palliative care, the fourth edition of this text also looks at the individual professional roles that contribute to the best-quality palliative care.

The Clinics Collections titles take a multidisciplinary approach to today's practice of medicine, selecting the most recent and relevant articles from the Clinics series and combining them into a single source of information on a focused topic. Articles are chosen from multiple Clinics to highlight the range of specialties covering major medical issues, delivering the information needed for successful interdisciplinary teamwork and effective patient care. Written from a variety of medical perspectives, these articles offer deeper insight into how each specialty cares for its patients and provide a unique entry into sharing best concepts for the entire medical team. Clinics Collections: Addiction Medicine draws from Elsevier's Clinics Review Articles database to provide today's medical teams with practical clinical advice and insights on this complex condition and its comorbidities. It guides readers on how to apply current primary research findings to everyday practice, keep up with new and improved treatment methods, and improve patient outcomes. Areas of focus include opioids, alcoholism, cannabis, and prescription medicine. Each article begins with keywords and key points for immediate access to the most critical information. Articles are presented in an easy-to-digest and concisely worded format.
