The idea of teachers Learning through Teaching (LTT) – when presented to a naïve bystander – appears as an oxymoron. Are we not supposed to learn before we teach? After all, under the usual circumstances, learning is the task for those who are being taught, not of those who teach. However, this book is about the learning of teachers, not the learning of students. It is an ancient wisdom that the best way to “ truly learn ” something is to teach it to others. Nevertheless, once a teacher has taught a particular topic or concept and, consequently, “ truly learned ” it, what is left for this teacher to learn? As evident in this book, the experience of teaching presents teachers with an exciting opportunity for learning throughout their entire career. This means acquiring a “ better ” understanding of what is being taught, and, moreover, learning a variety of new things. What these new things may be and how they are learned is addressed in the collection of chapters in this volume. LTT is acknowledged by multiple researchers and mathematics educators. In the first chapter, Leikin and Zazkis review literature that recognizes this phenomenon and stress that only a small number of studies attend systematically to LTT processes. The authors in this volume purposefully analyze the teaching of mathematics as a source for teachers ’ own learning.

I have been broken from the beginning. It is the reason why those in the hospital can never cure me. I run away from the medical facility, and turn to a woman, whose name I do not remember. Then, the two of us start an escape journey. In the first place, what am I? I wonder who I am. In the chaos, I cannot even recall my name, but the deadly beautiful view of the sky emerges in my mind. Since I know it will disappear sometime in the future, I want to touch it a little bit before it is too late. I want to reach for it, and seize it with my hand. “ Cradle the Sky, ” the 5th (final) novel of the series, leads to already available “ The Sky Crawlers, ” chronologically the last story in the timeline.

The idea of the ICMI Study 13 is outlined as follows: Education in any social environment is influenced in many ways by the traditions of these environments. This study brings together leading experts to research and report on mathematics education in a global context. Mathematics education faces a split phenomenon of difference and correspondence. A study attempting a comparison between mathematics education in different traditions will be helpful to understanding this phenomenon.

In 2011, Showtime premiered *Shameless*, a comedy-drama about the audacious behaviors of the Gallaghers, a white, working-class family living in Chicago's South Side. In 2020, the series headed into the production of its eleventh and final season, making it the longest-running original scripted program in Showtime's history. *Shameless* explores topics such as poverty, alcoholism, teen pregnancy, and mental illness. The series has been credited with "reinventing working-class TV" and for humanizing groups that are typically "othered" or simply laughed at. However, others have critiqued the show for relying on and promoting stereotypes, and for the cavalier ways in which it portrays controversial social issues like rape and abortion. *Shameless Sociology: Critical Perspectives on a Popular Television Series* offers a critical eye toward topics such as gentrification, pregnancy and abortion, racial and gender inequality, and homophobia, and illustrates the ways in which *Shameless* sometimes confronts and topples stereotypes, yet, at other times, serves to reinforce and perpetuate them. Given the broad appeal of the show and the diverse topics it covers, this book will appeal to the general public, as well as researchers of media, culture, and social inequalities, and undergraduate and graduate students at institutions of higher education.

In *The Queer Games Avant-Garde*, Bonnie Ruberg presents twenty interviews with twenty-two queer video game developers whose radical, experimental, vibrant, and deeply queer work is driving a momentous shift in the medium of video games. Speaking with insight and candor about their creative practices as well as their politics and passions, these influential and innovative game makers tell stories about their lives and inspirations, the challenges they face, and the ways they understand their places within the wider terrain of video game culture. Their insights go beyond typical conversations about LGBTQ representation in video games or how to improve "diversity" in digital media. Instead, they explore queer game-making practices, the politics of queer independent video games, how queerness can be expressed as an aesthetic practice, the influence of feminist art on their work, and the future of queer video games and technology. These engaging conversations offer a portrait of an influential community that is subverting and redefining the medium of video games by placing queerness front and center. Interviewees: Ryan Rose Aceae, Avery Alder, Jimmy Andrews, Santo Aveiro-Ojeda, Aevee Bee, Tonia B\*\*\*\*\*, Mattie Brice, Nicky Case, Naomi Clark, Mo Cohen, Heather Flowers, Nina Freeman, Jerome Hagen, Kat Jones, Jess Marcotte, Andi McClure, LLaura McGee, Seanna Musgrave, Liz Ryerson, Elizabeth Sampat, Loren Schmidt, Sarah Schoemann, Dietrich Squinkifer, Kara Stone, Emilia Yang, Robert Yang

Chicago has long struggled with racial residential segregation, high rates of poverty, and deepening class stratification, and it can be a challenging place for adolescents to grow up. *Unequal City* examines the ways in which Chicago's most vulnerable residents navigate their neighborhoods, life opportunities, and encounters with the law. In this pioneering analysis of the intersection of race, place, and opportunity, sociologist and criminal justice expert Carla Shedd illuminates how schools either reinforce or ameliorate the social inequalities that shape the worlds of these adolescents. Shedd draws from an array of data and in-depth interviews with Chicago youth to offer new insight into this understudied group. Focusing on four public high schools with differing student bodies, Shedd reveals how the predominantly low-income African American students at one school encounter obstacles their more affluent, white counterparts on the other side of the city do not face. Teens often travel long distances to attend school which, due to Chicago's segregated and highly unequal neighborhoods, can involve crossing class, race, and gang lines. As Shedd explains, the disadvantaged teens who traverse these boundaries daily develop a keen "perception of injustice," or the recognition that their economic and educational opportunities are restricted by their place in the social hierarchy. Adolescents' worldviews are also influenced by encounters with law enforcement while traveling to school and during school hours. Shedd tracks the rise of metal detectors, surveillance cameras, and pat-downs at certain Chicago schools. Along with police procedures like stop-and-frisk, these prison-like practices lead to distrust of authority and feelings of powerlessness among the adolescents who experience mistreatment either firsthand or vicariously. Shedd finds that the racial composition of the student body profoundly shapes students' perceptions of injustice. The more diverse a school is, the more likely its students of color will recognize whether they are subject to discriminatory treatment. By contrast, African American and Hispanic youth whose schools and neighborhoods are both highly segregated and highly policed are less likely to understand their individual and group disadvantage due to their lack of exposure to youth of differing backgrounds.
