Lecture 11 Statistical Process Control Quality Control  
Statistical process control, is a graphical tool used to monitor on-  
going performance. Control charts can trace their origins back to  
Shewhart at Western Electric in the 1920s. Control charts show  
process variation while work is underway. It provides a means for  
monitoring the state of the process in real-time, and detecting  
issues.

In modern SPC, a process is said to stable or in control when the observed variation appears statistically to be caused by common cause variation, at the level that has historically been recorded for the process. This is often achieved using a control chart showing limits which represent the expected level of variation.
