Patients often present to health care clinics with complaints of sciatica or pain radiating from the back or buttock into the thigh or leg. Frequently, the patient has a lumbar or sacral radiculopathy caused by a degenerative etiology, however, there are many possible causes for these symptoms. This text utilizes almost 600 references to fully explore the many causes of and mimics of radiculopathy of the lumbar and sacral spine. This book details the clinical features that help distinguish a degenerative etiology of lumbosacral radiculopathy from other categories, such as vascular (e.g. aortic aneurysm, epidural hematoma), infection (e.g. spondylodiscitis, shingles), and tumor (e.g. spinal metastasis, schwannoma). Each section includes: An estimation of the frequency of the condition as a cause or mimic of LSR (when possible), pathophysiological mechanisms that cause neurological deficit or pain, possible distinguishing clinical features, distinguishing imaging and/or laboratory tests, and examples of misdiagnoses or challenging cases. Summary lists are generated that include various historical and physical findings with a differential diagnosis of conditions to consider.

Management is a collaboration between experts in anesthesiology, geriatric medicine, neurology, psychiatry and rehabilitation which presents a multidisciplinary management strategy. Over 60 chapters follow a standard, easy-to-read, quick access format on: clinical presentation, signs and symptoms, lab tests, imaging studies, differential diagnosis, pharmacotherapy, non-pharmacologic approach, interventional procedure, follow-up and prognosis. The broad spectrum of topics include headache, neck and back pain, bursitis, phantom limb pain, sickle cell disease and palliative care. Unlike other large, cumbersome texts currently available, this book serves as a quick, concise and pertinent reference in the diagnosis and management of common pain syndromes.

"Fifty-six American and Canadian specialists in spinal surgery contribute to a text providing residents with the information needed during spine surgery rotations. Thirty-four chapters are organized into sections covering examination and diagnostics, trauma, infection, tumors, degenerative disorders, spinal deformity, metabolic and inflammatory disorders, and surgical approaches. Illustrated with photographs and diagrams, algorithms, lists, charts, and tables throughout the text, this resource can be read cover to cover during a rotation or used as a quick reference before a patient work-up or procedure. This most complete monograph so far published on the subject analyses all aspects related to the etiopathogenesis, pathomorphology, diagnosis and treatment of lumbar disc herniation. Five chapters are dedicated to biological and pathomorphologic aspects, while five deal with the clinical presentation and diagnostic tests in both extreme depth and breadth. Much space is devoted to conservative, percutaneous and surgical treatments, as well as the causes and management of failed back syndrome.

This book summarizes research about sciatica for clinicians such as chiropractors, physical therapists, primary care providers, osteopaths, and psychiatrists. Well-informed patients will also benefit from reading this book. This book uses thousands of references, hundreds of images, original illustrations, and case studies to review mechanisms of pain, examination techniques, and treatment of sciatica. While the focus is on non-pharmaceutical and minimally invasive treatments, this book also reviews the indications for more invasive procedures. Each chapter also includes a historical review dating back decades or centuries, which puts the newer treatments in perspective. In this book you will learn: What is sciatica and does it always relate to the spine? What common features occur in most cases of sciatica? Has our concept of what causes sciatica changed over time? What does it mean when symptoms are above the knee or below the knee? Can imaging help determine if disc lesions are causing symptoms? Does sciatica mean you are just getting old? What mechanisms allow disc herniations to heal? What percentage of cases of sciatica typically require surgery? What are the most effective non-pharmaceutical treatments for sciatica? What vitamins and natural substances are beneficial for sciatica?
