Meiosis Study Guide, Overview and Diagrams

Meiosis is a two-part cell division process in organisms that
sexually reproduce. Meiosis produces gametes with one half
the number of chromosomes as the parent cell. In some
respects, meiosis is very similar to the process of mitosis, yet
it is also fundamentally different from mitosis. The two
stages of meiosis are meiosis I and meiosis II.

Study Guide: Mitosis | Biology I - Lumen Learning

Two major phases of meiosis occur: meiosis I and meiosis II. During meiosis I, a single cell divides into two. During meiosis II, those two cells each divide again. The same demarcating phases of mitosis take place in meiosis I and meiosis II—prophase, metaphase, anaphase, and telophase—but with some variations contained therein.

Mitosis. Cell's division (PMAT) of the nucleus. Final product is 2 cells that are exactly like the parent cell. Meiosis. A type of cell division that results in four daughter cells each with half the number of chromosomes of the parent cell, as in the production of gametes and plant spores. Sister chromatids.
