of neurotransmitters involving amino acids, monoamines, neuropeptides, and neurotrophic factors, among several others. The neuropharmacology and neural circuits that underlie complex behaviors as well as major neural disorders are also discussed as are the drugs used to treat those conditions. In the final section, the authors use the concepts presented in the first two sections to explain how irregularities in the biochemistry of neuronal interactions can lead to a wide array of clinical manifestations.

excitability to signal transduction to gene expression. In Part 2 information about the major neurotransmitter systems in the brain and spinal cord is presented. Also included in Part 2 is a discussion of neurotrophic factors. Part 3 uses the basic information contained in Parts 1 and 2 to build a systems-level description of the major domains of complex nervous system function.

Presents a molecular and cellular approach to drugs that affect the central nervous system, brain function, and disease states within the nervous system. This book contains illustrations and integrates molecular, cellular, and physiological concepts with pharmacology, and explores the relevance of this model to disease and therapeutics.

The text ranges from drugs that affect the
