In the soil, nutrients interact with one another leading to changes in availability to plants. The figure below (Mulder's Chart) displays the various interactions that can occur. Antagonism: High levels of a particular nutrient in the soil can interfere with the availability and uptake of other nutrients. For example,

Mulder's Chart: Nutrient Interactions—NutriAg Group

Mulder's Chart shows some of the interactions between plant nutrients. High levels of a particular nutrient in the soil can interfere with the availability and uptake by the plant of other nutrients. Those nutrients which interfere with one another are said to be antagonistic.

Mulder's Chart of Plant Nutrient—Permaculture Noosa

Mulder's chart of mineral interactions Chart showing how the presence or absence of various elements influences the uptake of other elements by plants. Mulder's chart of nutrient interactions

Mulder's chart of mineral interactions—Soil Analyst—

This is why too much or too little of certain minerals in the soil may interfere with nutrient availability. This is where Mulder's Chart comes in. How to use Mulder's Chart Looking at Mulder's Chart, you can see 11 essential plant nutrients and micronutrients arranged around a circle. Solid and dotted lines connect the nutrients, with arrows heading one way or the other.

Mulders Chart Nutrient Interaction

Mulder's Chart shows some of the interactions between plant nutrients. High levels of a particular nutrient in the soil can interfere with the availability and uptake by the plant of other nutrients.

Mulder's Chart—cultivaeogrowth.com

If we look at a Mulder's Chart, we will see that over application of nitrogen will reduce the plants ability to uptake potash, boron and copper. If you do make the application of N, be sure to address the plants need for the other nutrients. CLICK HERE to VIEW a Mulder's Chart, one is available on our website. If you have any questions about this, please feel free to contact us via email or phone.

What is a Mulder's Chart?—cultivaeogrowth.com

The Mulder's Chart shows how elements interact. The dotted lines show which elements enhance each other. The solid lines show which elements antagonize each other. For example, calcium can cause a magnesium deficiency, while nitrogen can solve this deficiency. So adding extra magnesium isn't necessary! Relative proportions of plant nutrients

The ratio between plant nutrients explained—Canna

Mulder's Chart (above) helps to simplify understanding the interactions between plant nutrients. Some elements work in synergy. They stimulate the uptake of other elements and increase their availability while some elements are 'antagonistic'. They interfere with the uptake or availability of other nutrients.
