THERMOCOUPLES: THE OPERATING PRINCIPLE. A

A thermocouple is a device made by two different wires joined at one end, called junction end or measuring end. The two wires are called thermoelements or legs of the thermocouple: the two thermoelements are distinguished as positive and negative ones. The other end of the thermocouple is called tail end or reference end ().

Cogeneration is normally defined as the simultaneous production of two or more forms of useful energy, usually electricity and heat, from a single fuel source. In Europe and other countries, this concept is often referred to as Combined Heat and Power (CHP).

~~COGENERATION and COMBINED-CYCLE PRINCIPLES WORKSHOP~~

Principles of Rolling: The rolling is a process which consists of passing the metal through a gap between rollers rotating in opposite direction. This gap is smaller than the thickness of the part being worked. Therefore, the rollers compress the metal while simultaneously shifting it forward because of the friction at the roller-metal interfaces.
