Zero Carbon' is an abstract concept for most people, but we have lived energy-profligate lifestyles for too long on finite fossil-fuel resources. We now face potential environmental catastrophe from climate change and global warming, with a continuing exponentially expanding global population that doubles every four decades. The capacity of the planet to reabsorb carbon dioxide is about two to three tonnes of carbon equivalent per person at current population levels of seven billion and therefore there is a desperate need for us to

reduce our carbon footprint. A way of helping to achieve this is to live in a zero-carbon house, and this will become UK legislation for new homes by 2016. This fascinating book covers all aspects of the zero-carbon house, from its evolution to achieving carbon neutrality in old and new homes as well as entire communities. Includes an overview of zero carbon and how to achieve it on a global scale; covers communities of zero-carbon houses and provides inspirational examples of low-carbon lifestyles. Case studies show how principles are put into successful practice to save energy, carbon, money and the environment.

A practical, bipartisan call to action from the world's leading thinkers on the environment and sustainability Sustainability has emerged as a global priority over the past several years. The 2015 Paris Agreement on climate change and the adoption of the seventeen Sustainable Development Goals through the United Nations have highlighted the need to address critical challenges such as the buildup of greenhouse gases in the atmosphere, water shortages, and air pollution. But in the United States, partisan divides, regional disputes, and deep disagreements over core principles have made it nearly impossible to chart a course toward a sustainable future. This timely new book, edited by celebrated scholar Daniel C. Esty, offers fresh thinking and forward-looking solutions from environmental thought leaders across the political spectrum. The book's forty essays cover such subjects as ecology, environmental justice, Big Data, public health, and climate change, all with an emphasis on sustainability. The book focuses on moving toward sustainability through actionable, bipartisan approaches based on rigorous analytical research.

Provides actors with instructions and exercises to speak in a variety of different accents.

Ensign Paul Sinclair must investigate the actions of Pete Wakeman, the captain of the USS Michaelson, a state-of-the-art warship, who has ordered the annihilation of a civilian research vessel - a crime that effects the entire universe. Original.
