~~Notes for Signals and
Systems – Johns
Hopkins University~~

A signal is said to be continuous when it is defined for all instants of time.

~~Signals Classification
– Tutorialspoint~~

A signal is a function, so when we say a continuous time signal

or a discrete time signal we really mean continuous time functions and discrete time functions.

Continuous Time (CT) Signals A continuous time signal is a function that is continuous, meaning there are no breaks in the signal.

Continuous-time signal is the “function of continuous-time variable that has uncountable or infinite set of numbers in its sequence”. The continuous-time signal can be

defined at any instant
of the time in its
sequence. The
continuous-time
signal is also termed
as analog signal.

~~Definition of
Continuous And
Discrete Signals |
Chegg.com~~

Continuous systems
are those types of

Online Library Signals And

Systems in which input and output signals are the same at both the ends. In this type of system, variable changes with time and any type of variation is not found in the input and output signal. In response to the input signal, a continuous system generates an output signal.
