Number Memory - Human Benchmark
In psychology and neuroscience, memory span is the longest list of items that a person can repeat back in correct order immediately after presentation on 50% of all trials. Items may include words, numbers, or letters. The task is known as digit span when numbers are used. Memory span is a common measure of short-term memory. It is also a component of cognitive ability tests such as the WAIS. Backward memory span is a more challenging variation which involves recalling items in reverse order.

Memory span - Wikipedia
Task Details The digit span task is a simple short-term memory measure that involves the storage and recall of digits in correct serial position. For any given span size (n) the participant will be shown n digits that are randomly selected between 10 and 99.

Digit Span
Although the authors subsequently referred to the test as the Digit Memory Test (DMT), it is commonly known as the Hiscock malingering test or simply the Hiscock test. The test has never been distributed as a commercial product, but the senior author has responded to requests for information about the test by sending instructions for constructing the stimuli, administering the test, and interpreting the results.
