Why shouldn't people who deplete our natural assets have to pay, and those who protect them reap profits? Conservation-minded entrepreneurs and others around the world are beginning to ask just that question, as the increasing scarcity of natural resources becomes a tangible threat to our own lives and our hopes for our children. The New Economy of Nature brings together Gretchen Daily, one of the world's leading ecologists, with Katherine Ellison, a Pulitzer-prize winning journalist, to offer an engaging and informative look at a new "new economy" -- a system recognizing the economic value of natural systems and the potential profits in protecting them.Through engaging stories from around the world, the authors introduce readers to a diverse group of people who are pioneering new approaches to conservation. We meet Adam Davis, an American business executive who dreams of establishing a market for buying and selling "ecosystem service units;" John Wamsley, a former math professor in Australia who has found a way to play the stock market and protect native species at the same time; and Dan Janzen, a biologist working in Costa Rica who devised a controversial plan to sell a conservation area's natural waste-disposal services to a local orange juice producer. Readers also visit the Catskill Mountains, where the City of New York purchased undeveloped land instead of building an expensive new water treatment facility; and King County, Washington, where county executive Ron Sims has dedicated himself to finding ways of "making the market move" to protect the county's remaining open space.Daily and Ellison describe the dynamic interplay of science, economics, business, and politics that is involved in establishing these new approaches and examine what will be needed to create successful models and lasting institutions for conservation. The New Economy of Nature presents a fundamentally new way of thinking about the environment and about the economy, and with its fascinating portraits of charismatic pioneers, it is as entertaining as it is informative.

Offering a blueprint for a prosperous, greener world, a new approach to ecology and economics declares that humanity cannot have one without the other and must stop viewing environmental destruction as morally wrong and start seeing it as fiscally irresponsible.

Jane Jacobs has spent years changing the way we think about economic life in general. Now, in The Nature of Economies, Jacobs proposes a radical notion that has breath-taking common sense: economies are governed by the same rules as nature itself. With the simplicity of an extremely wise and seasoned thinker, Jane Jacobs shows us that by looking to nature, we can develop economies that are both efficient and ecologically friendly. The Nature of Economies is written in dialogue form: five intelligent friends discussing over coffee how economies work. The result is a wonderfully provocative, truly ground-breaking work by one of the great thinkers of our time.

Nature's Economy is a wide-ranging investigation of ecology's past, first published in 1994.

An overview of the benefits and services that nature offers to people. The contributors present a detailed synthesis of our current understanding of a suite of ecosystem services and a preliminary assessment of their economic value.

As the accelerated technological advances of the past two decades continue to reshape the United States' economy, intangible assets and high-technology investments are taking larger roles. These developments have raised a number of concerns, such as: how do we measure intangible assets? Are we accurately appraising newer, high-technology capital? The answers to these questions have broad implications for the assessment of the economy's growth over the long term, for the pace of technological advancement in the economy, and for estimates of the nation's wealth. In Measuring Capital in the New Economy, Carol Corrado, John Haltiwanger, Daniel Sichel, and a host of distinguished collaborators offer new approaches for measuring capital in an economy that is increasingly dominated by high-technology capital and intangible assets. As the contributors show, high-tech capital and intangible assets affect the economy in ways that are notoriously difficult to appraise. In this detailed and thorough analysis of the problem and its solutions, the contributors study the nature of these relationships and provide guidance as to what factors should be included in calculations of different types of capital for economists, policymakers, and the financial and accounting communities alike.

The classic book on business strategy in the new networked economy— from the author of the New York Times bestseller The Inevitable Forget supply and demand. Forget computers. The old rules are broken. Today, communication, not computation, drives change. We are rushing into a world where connectivity is everything, and where old business know-how means nothing. In this new economic order, success flows primarily from understanding networks, and networks have their own rules. In New Rules for the New Economy, Kelly presents ten fundamental principles of the connected economy that invert the traditional wisdom of the industrial world. Succinct and memorable, New Rules explains why these powerful laws are already hardwired into the new economy, and how they play out in all kinds of business—both low and high tech— all over the world. More than an overview of new economic principles, it prescribes clear and specific strategies for success in the network economy. For any worker, CEO, or middle manager, New Rules is the survival kit for the new economy.

This book analyzes the multiple levels of meaning which people attach to work today, and the role of work in people's lives. By looking at call centres and software development, the book evaluates some of the claims made for the knowledge economy and argues that defining the work-life boundary is a constant problem for many workers
